

Used Parts for Forklifts

Used Forklift Parts - Inevitably, lift truck components would eventually wear out and need replacing. The alternative of obtaining new components can become pricey so another idea is to purchase used parts. This can save much money in the long run. It is a great idea to purchase used forklift parts which have been remanufactured. These components would ensure that you are getting components which would work for a long time and be productive.

Broken or worn parts which are remanufactured are a cheaper answer than rebuilding. With rebuilding components, just the components that are worn out or broken get changed, which means that other wearable components might break down soon after purchase.

Remanufacturing however offers the best assurance for second-hand parts. Reproduced parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable parts are replaced regardless of age or wear which is one more reason why reproduced parts overall operate so much better. Any part within the part is brand new and this provides much longer life to the second-hand part. Based on the forklift parts which are being redone, the cleaning process and the whole remanufacturing process would vary.

The engines are cleaned after a complete disassembly. Several engine parts like for example rings, pistons, spark plugs, filters, valves, and valve springs can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to guarantee that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are disassembled, oven cleaned and pressure washed. A comprehensive examination is done to be able to check for any cracks. Bushings, seals and bearings are all replaced. Typically, the replacement components used on transmission components meet OEM specifications.

Some lift truck parts like torque converters, the alternator, the water pump, the starter and steer axles could be quite serviceable after worn components are replaced. The electronic control in the electric lift truck is maintained by the control card. This card could even be reproduced with replacing all aged and worn out parts. Unlike several forklift parts the control card could only have the worn and aged parts replaced.

Parts that are remanufactured have to be thoroughly checked upon reassembly to guarantee they are in good condition previous to being sold. When acquiring these parts, it is a good idea to make sure that they have undergone all of the proper testing and inspections. On certain larger components like for instance transmissions, steer axles and engines, OEM specification replacement components must be utilized.

The forklift dealer can ensure that the parts they have remanufactured meet the OEM specifications. This would even ensure the parts meet industry standards. Many details go into remanufacturing used parts. This attention to detail provides more serviceability out of remanufactured components opposed to the parts that were just rebuilt.
