With a network consisting of over 90 autonomous sellers, the forklift group supplies quality materials handling equipment to the wide-ranging North American marketplace. Doosan Infracore America Forklift sellers successfully operate in over 220 service and sales locations throughout Canada and the U.S. The lift truck product line remarkably comprises of 63 different models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion lift trucks. Capacities of these numerous truck versions vary from 3,000 to 33,000 lbs. All vehicles are manufactured in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest developing forklift and lift truck company in the North American marketplace, thanks to its exceptional level of product performance and their persistently high level of consumer support and service given to all Doosan Infracore Lift Truck clients. The U.S. forklift division located in Cleveland has a expert team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's initial home-based lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled forklifts as part of a nationwide machinery expansion venture. Early sales of this manufacturing equipment focused on large business groups, the armed forces and on state-run corporations. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for enhancing quality and product development.

Daewoo began the first domestic forklift business in 1967, and rapidly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of significant growth of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This plan greatly expanded Daewoo's lift truck sales. Construction was completed in 1984 to facilitate a new plant which helped set up the company for the fabrication of high end added-value products suitable for export. In 1993, the corporation had a global sales network and started exporting versions they had established through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into international marketplaces.
